DS d'Anglais Appliqué

Fiche de révision complète : questions de cours et réponses

Pr. Nouri Sahbani · ESAD · Département d'Architecture · 2026/2027

À corriger sur vos feuilles avant demain

J'ai relu toutes vos réponses écrites à la main. La plupart sont justes. Voici les points à vérifier :

Où	Vous avez écrit	Réponse la plus probable
History, vocabulaire n° 13 « having something as a result »	manifest	meant (dans le texte : « political and territorial changes meant that a distinct style gradually emerged »)
History, vocabulaire n° 15 « a building used to worship god or gods in non-Christian religions »	mosque	temple (le texte parle de « the temple or palace »). Mosque ne dit pas « religions » au pluriel.
History, vocabulaire n° 5 « a rule or a guide for behaviour/moral instruction »	order (difficile à lire)	Je ne trouve pas le mot dans le texte. Cherchez dans votre cours : précepte = precept / tenet. À vérifier avec le texte.
Building Materials, question 5 (negative aspect of steel)	expensive building material ; also its weight	Le texte dit seulement : steel is relatively expensive. Le poids n'est pas un défaut dans le texte (high strength-to-weight ratio).
Building Materials, question 3 (concrete / mortar)	difference in the aggregates	Réponse plus complète : mortar = sand + water + cement or lime (pour fixer les briques) ; concrete = broken stone or gravel + sand + cement + water (matériau de structure).
History, question 2 : le 2e point (Byzantine style solely…) n'a pas de justification écrite	(vide)	False : le style est aussi le résultat de la technologie et d'influences du Proche-Orient (voir section 6).

Je n'ai pas vu la page 2 du texte « Building Materials » (début, avec le béton). Les réponses aux questions 1, 2 et 3 reposent sur vos réponses, sur les définitions du cours et sur les pages 3 et 4 : vérifiez-les avec cette page si vous l'avez.

Comment réviser (75 minutes)

- **20 min :** les 4 listes de vocabulaire (sections 1 à 4). Les définitions sont celles de votre cours : apprenez-les presque mot pour mot.
- **20 min :** Building Materials, History of Ancient Architecture et What is Architecture ? : les réponses aux questions en phrases complètes.
- **15 min :** Notre-Dame, Tom Wright, Zaha Hadid, Palm Islands.

- **20 min :** le mini-test de 35 questions à la fin. Cachez la colonne de droite.

> **Astuce :** Dans le DS, répondez en phrases complètes en anglais et reprenez les mots du texte. Pour « True or false », écrivez la réponse puis justifiez avec une phrase du texte.

1. Exploring Vocabulary (Part One)

#	Word	Definition (à connaître)	En français
1	utilities	Providers of essential services such as gas, electricity, water or telecommunications.	les réseaux / services publics
2	focal point	A prominent structure, feature or area of interest or activity.	point focal
3	renovation	Modernization of an old or historic structure which, unlike restoration, may not be consistent with the original design.	rénovation
4	restoration	Accurately recovering the form and details of a building and site as it appeared at a particular period of time, by removing later work or replacing missing earlier work.	restauration
5	amenity	The pleasant or normally satisfactory aspects of a location which contribute to its overall character and the enjoyment of residents or visitors.	agrément, équipement agréable
6	backland	Land which is behind existing development with no, or very limited, road frontage.	terrain en retrait (en cœur d'îlot)
7	contaminated land	Land which has been polluted or harmed in some way, rendering it unfit for safe development and most practical uses.	terrain pollué
8	scale	The sense of proportion or apparent size of a building or building element as created by the placement and size of the building in its setting.	échelle
9	urban design	The planning and design of cities focusing on the three-dimensional form and function of public and publicly accessible space.	conception urbaine

> **Astuce :** Piège classique : renovation ≠ restoration. La restoration retrouve l'état d'origine ; la renovation modernise et peut s'éloigner du projet d'origine.

2. Building Materials : vocabulary check

	Word	Definition (à connaître)	En français
a	beam	A long, thick piece of wood, metal or concrete, especially used to support weight in a building or other structure.	poutre
b	grout	A mortar or paste for filling crevices, especially the gaps between wall or floor tiles.	coulis, joint de carrelage
c	ratio	The relationship between groups or amounts that expresses how much bigger one is than the other.	rapport, proportion
d	versatile	Able to change easily from one activity to another, or able to be used for many different purposes.	polyvalent
e	load	The amount of weight carried, especially by a vehicle, a structure such as a bridge, or an animal.	charge
f	mortar	A mixture of sand, water, and cement or lime that is used to fix bricks or stones to each other when building walls.	mortier
g	facility	A place, especially including buildings, where a particular activity happens.	installation, équipement
h	span	The period of time that something exists or happens.	durée (et aussi : portée)
i	aggregate	A material or structure formed from a mass of fragments or particles loosely compacted together.	granulat
j	rebar	Steel in the form of bars or a mesh, put inside concrete to make it stronger.	armature, fer à béton
k	timber	A long piece of wood used for building, especially houses and ships.	bois de construction
l	concrete	A building material made from a mixture of broken stone or gravel, sand, cement and water, which can be spread or poured into moulds and forms a mass resembling stone on hardening.	béton

Astuce : Ne confondez pas : beam (poutre) et timber (bois de construction) ; mortar (colle les briques) et grout (remplit les joints de carrelage) ; load (le poids porté) et span (la durée, la portée).

3. History of Ancient Architecture : vocabulary check

#	Word	Definition	En français
1	fort	A building especially made or strengthened for the military defence of an area.	fort, forteresse
2	drift	A continuous uncontrolled movement ("stylistic drift").	dérive
3	secular	Not concerned with religious or spiritual affairs.	laïque, profane
4	alabaster	Soft white stone, like marble in appearance, often carved to make ornaments.	albâtre
5	?	A rule or a guide for behaviour / moral instruction. Vous avez écrit « order » : à vérifier (voir « À corriger » au début).	précepte, règle
6	pier	A structure of wood, iron… built out into the sea or lake so that boats can stop and take on or put down passengers or goods. (Dans le texte : massive piers = gros piliers.)	jetée ; pilier
7	emerge	To come into view / appear.	apparaître, émerger
8	encompass	To include or comprise something.	englober, comprendre
9	plaster	A soft mixture of lime, sand and water that becomes hard when dry and is used for making a smooth surface on walls and ceilings.	plâtre, enduit
10	dome	A rounded roof with a circular base.	dôme, coupole
11	imbue	To be filled or inspired with feelings ("a style imbued with influences").	imprégner
12	endure	To undergo something painful and uncomfortable; to last ("the empire endured for more than a millennium").	endurer, durer
13	meant	Having something as a result ("…changes meant that a distinct style gradually emerged"). Vous avez écrit « manifest » : à vérifier.	avoir pour conséquence
14	evolve	To develop naturally and gradually ("an evolving range").	évoluer
15	temple	A building used to worship god or gods in non-Christian religions. Vous avez écrit « mosque » : à vérifier.	temple

4. What is Architecture ? : pre-reading vocabulary

Meaning	Word	En français
only	solely	seulement
to show and exhibit	display	montrer, exposer
feel deep respect, mainly religious	revere	vénérer
god or goddess	deity	divinité
having a great effect through size, grandeur or importance	impressive	impressionnant
understanding the true nature of something	grasp	saisir, comprendre
include or comprise many parts at a time	encompass	englober
rule of a king or queen	reign	règne
originate or appear	emerge	apparaître
way in which parts of something are arranged according to a plan	layout	agencement, plan
related to the needs of citizens	civic	civique
scenery of an area of land	landscape	paysage
things said or done to show great respect	homage	hommage
the art of representing objects by lines with a pencil, chalk	drawing	dessin

> **Astuce :** Les deux mots les plus faciles à confondre : homage (les gestes de grand respect) et revere (ressentir un profond respect) ; solely (seulement) et display (montrer).

5. Building Materials : le texte et les 7 questions

Ce qu'il faut retenir du texte

- **Concrete :** very strong in compression, but brittle with limited tensile strength. With steel rebar it becomes reinforced concrete: stronger and suitable for a wide range of structures (tall multi-story buildings, bridges, roads, tunnels).
- **Steel :** one of the strongest materials, excellent in tension and compression; high strength-to-weight ratio, so ideal for tall buildings and large industrial facilities. Shapes: angles, I beams, C-channels, welded or bolted. It is relatively expensive, so the engineer must avoid overdesign. Installation is less time consuming than concrete and can be done in any environment.
- **Wood :** used for thousands of years and lasts hundreds of years if well maintained. Readily available, economically feasible, lightweight, highly machinable; good insulation from the cold, ideal for homes. Timber and beams are larger pieces used for frames of large structures; engineered wood is wood glued together (composite). Not suitable for heavy loads or long spans, and rarely used for foundations and basement walls.
- **Masonry :** individual units (concrete block, brick, stone, glass block) bound with mortar. Strong in compression, so ideal for load-bearing walls. Highly durable and fire-resistant, but sensitive to mortar and workmanship quality. Openings need horizontal beams or lintels. The bottom wall carries the accumulated load of all the floors above, so it is reinforced with steel bars and concrete grout.

Les 7 questions et les réponses modèles

1. What differentiates a building material from another?

Its properties: strength, weight, durability and cost. Each material has its own properties (for example steel: high strength-to-weight ratio; wood: lightweight and a good insulation; masonry: durable and fire-resistant).

2. On what basis is the choice of construction materials made?

On the properties of the material, its cost and effectiveness, and the application: the loads on the building and the type of structure.

3. Is there a difference between concrete and mortar?

Yes. Mortar is a mixture of sand, water and cement or lime, used to fix bricks or stones together when building walls. Concrete is a mixture of broken stone or gravel, sand, cement and water; poured into moulds, it hardens into a mass like stone and is a structural material.

4. Concrete is a good choice as a material. How is that?

It is very versatile and strong (very strong in compression). Combined with steel rebar, reinforced concrete is stronger and suitable for a wide range of structures: tall multi-story buildings, bridges, roads and tunnels.

5. State the negative aspect of steel.

Steel is a relatively expensive building material, so the structural engineer must choose economic sizes and shapes according to the actual loads, to avoid overdesign.

6. What is the most striking feature of wood?

It provides good insulation from the cold, which makes it an excellent building material for homes and residential buildings. (It is also lightweight, readily available, economically feasible and highly machinable.)

7. What is the best choice of material for load-bearing walls?

Masonry (for example concrete block with vertical steel reinforcing), because it is strong in resisting compression loads and is durable and fire-resistant.

6. History of Ancient Architecture

Ce qu'il faut retenir du texte

- **Egyptian:** people believed in the omnipotence of gods; cities marked a contained sacred space over the wilderness; the temple or palace acted as a house for the gods; construction was accompanied by rituals. The architect, priest or king, was part of a continuing tradition.
- **Byzantine:** a distinct entity after AD 330, when Constantine moved the capital east to Byzantium (Constantinople, now Istanbul). It endured for more than a millennium, influenced medieval and Renaissance Europe and, after 1453, led to Ottoman architecture. Greek cross plan; brick and plaster as well as stone; mosaics replaced carved decoration; complex domes on massive piers; windows with thin sheets of alabaster.
- **Islamic:** secular and religious styles. Principal types: the Mosque, the Tomb, the Palace, the Fort, the School and urban buildings; also public baths, fountains and domestic architecture. Many local styles (Abbasid, Persian, Moorish, Timurid, Ottoman, Fatimid, Mamluk, Mughal, Indo-Islamic, Sino-Islamic, Afro-Islamic). It discourages illustrations of anything living.
- **Indian:** a wide variety of geographically and historically spread structures, shaped by the history of the Indian subcontinent. Difficult to identify one single style, but with a certain continuity across history; a blend of native traditions and influences from West and Central Asia and Europe.

Comprehension check : réponses modèles

1. What characterizes ancient Egyptian architecture?

The tension between the divine and the mortal world: people believed in the omnipotence of gods, the temple or palace was a house for the gods, and the construction was accompanied by rituals to enter human activity into continued divine benediction.

2. True or false, and justify:

Statement	T / F	Justification
The political shift from Rome to Byzantium as a capital led to an additional value acquired by Byzantium.	True	It influenced medieval and Renaissance-era architecture in Europe and led directly to the architecture of the Ottoman Empire.
The Byzantine architectural style was solely the outcome of political changes.	False	Stylistic drift, technological advancement and political and territorial changes together meant that a distinct style emerged, with influences from the Near East.
The Islamic rules have only influenced the style of religious buildings.	False	They also developed a rich vocabulary for buildings of lesser importance such as public baths, fountains and domestic architecture.
The Indian architectural style was the outcome of a very restricted range of structures.	False	It encompasses a wide variety of geographically and historically spread structures.

3. Do you think that Islamic architecture includes only religious buildings? Justify.

No. Islamic architecture encompasses both secular and religious styles. Its principal types are the Mosque, the Tomb, the Palace, the Fort, the School and urban buildings, and it also developed a rich vocabulary for public baths, fountains and domestic architecture.

4. Find out the different materials used during the Byzantine period and the different architectural elements.

Materials: brick and plaster were used in addition to stone in the decoration of important public structures. Elements: the Greek cross plan in church architecture, classical orders used more freely, mosaics replacing carved decoration, complex domes resting upon massive piers, and windows with thin sheets of alabaster to softly illuminate the interiors.

5. What is the specific feature of Islamic architecture that sets it apart from other styles?

It discourages illustrations of anything living, such as animals and humans.

6. Find a piece of evidence in the text to show that Indian architecture is very rich.

"Architectural styles range from Hindu temple architecture to Islamic architecture to western classical architecture to modern and post-modern architecture." Also: "The diversity of Indian culture is represented in its architecture. It is a blend of ancient and varied native traditions, with building types, forms and technologies from West and Central Asia, as well as Europe."

7. What is Architecture ?

Ce qu'il faut retenir du texte

- Architecture refers to the actual design and layout of spaces. It encompasses construction, design, and the manipulation of light as it relates to shadow.
- Originally, architecture emerged from necessity. Early Egyptian and Mesopotamian architecture reflected the relationship between people and ancient religions: most buildings were meant to pay homage to the heavens.
- Persian architecture was designed solely to display the wealth of the state, and to impress guests. The Persians contributed to urban design by building massive cities (the need for shelter).
- With the Greeks and Romans, design shifted from a religious or pragmatic concentration to design based upon civic concerns. Their buildings were massive and impressive, and tested the boundaries of architecture.
- Today, architecture is frequently based upon modern concerns such as the environment, and is divided into specialized fields (a landscape architect solely designs landscapes; a church architect only works on religious structures).

Part Two : réponses modèles

1. Find out in the text the different components that make up the essence of architecture.

Construction, design, and the manipulation of light as it relates to shadow; functional and practical spaces; the display of the wealth of the state; the need for shelter. Today's architects must consider form, texture, structure, space, mass, materials and costs.

2. Classify the meaning and function of architecture according to different historical periods.

The historical period	Meaning and function
Egyptian and Mesopotamian	To worship revered religious deities; to pay homage to the heavens; to reflect the relationship between people and ancient religions.
Persian architecture	To display the wealth of the state and impress guests; urban design and massive cities (the need for shelter).
Greek and Roman	Design based upon civic concerns instead of religious or pragmatic ones; massive and impressive buildings that tested the boundaries of architecture.
Today	Design frequently based upon modern concerns such as the environment.

3. What characterizes today's architecture and what should architects take into consideration?

Today's architecture encompasses many specialized fields: architects concentrate on specific types of architecture and are frequently driven by modern concerns such as the environment. Architects must consider form, texture, structure, space, mass, materials and costs, and have a good grasp of mathematics, engineering and science. Most architects spend many years working within the field before working as independent contractors.

8. Notre-Dame de Paris (Part Three)

Mots à placer : retain, deterioration, massive, daring, restoration, distinguished, completed, aisles.

#	Mot	Phrase complète
1	distinguished	…and is distinguished for its size, antiquity, and architectural interest.
2	completed	The choir, the western facade, and the nave were completed by 1250…
3	aisles	…flanked by double aisles and square chapels.
4	restoration	Its central spire was added during restoration in the 19th century.
5	massive	Two massive towers crown the western facade…
6	daring	…flying buttresses of the more daring Rayonnant Gothic style…
7	retain	The cathedral's three great rose windows alone retain their 13th-century glass.
8	deterioration	Notre-Dame suffered damage and deterioration through the centuries…

Les faits à retenir

- Notre-Dame is a cathedral church in Paris, France, the most famous of the Gothic cathedrals of the Middle Ages.
- It lies at the eastern end of the Île de la Cité, built on the ruins of two earlier churches, which were themselves built after a Gallo-Roman temple dedicated to Jupiter.
- The choir, the western facade and the nave were completed by 1250; porches, chapels and other embellishments were added over the next 100 years.
- Plan: a choir and apse, a short transept, and a nave flanked by double aisles and square chapels.
- Size: 130 m by 48 m in plan; the roof is 35 m high; the two towers are 68 m high.
- The western facade is divided into three stories, with doors adorned with fine early Gothic carvings and a row of figures of Old Testament kings.
- The apse has large clerestory windows and is supported by single-arch flying buttresses of the more daring Rayonnant Gothic style.
- The central spire was added during the restoration in the 19th century. The spires planned for the towers were never added.
- The three great rose windows alone retain their 13th-century glass.
- The cathedral suffered damage and deterioration through the centuries and underwent major restorations in the mid-19th century.

Vocabulaire du texte

English	Français	English	Français
apse	abside	to retain	conserver
transept	transept	deterioration	détérioration
nave	nef	atrium	atrium
choir	chœur	helicopter landing pad	héliport

English	Français	English	Français
aisle	bas-côté	archipelago	archipel
clerestory windows	fenêtres hautes	sinuous	sinueux
flying buttress	arc-boutant	bland / mundane	fade / banal
rose window	rosace	assertive	affirmé, affirmatif
spire	flèche	upscale	haut de gamme
facade	façade	brimming with	débordant de
embellishments	ornements	landmark	point de repère, monument
daring	audacieux	versatility	polyvalence

9. Tom Wright, Zaha Hadid et les Palm Islands (Part Two)

Tom Wright. 1. What are the features of the Burj Al Arab that make it so unusual?

It is the most recognizable hotel in Dubai. It is unusual because of its luxurious amenities, the world's tallest atrium, its own helicopter landing pad and the tallest tennis court, which is at the top of the building.

Tom Wright. 2. How did he develop the idea of the building?

The brief was to create an icon for Dubai, as Sydney has its opera house. His first drawing, a felt-pen illustration on a paper serviette, was an early development sketch made on the terrace of the Chicago Beach hotel, next to the site. Shown to the client in October 1993 with a simple card model, it convinced the client that the tower should be built. It was founded in 1993 and completed in 1999.

Zaha Hadid. 1. How can you characterize Hadid's projects?

Dynamic formal qualities of sinuously curving shapes, or crystallized strata: a kind of new Baroque, sensuous, vibrant and engaging. Never bland or mundane, but assertive statements that the world may indeed look different.

Zaha Hadid. 2. What are the examples of Hadid's versatility in architecture?

The Contemporary Art Centre in Cincinnati, a car factory for BMW and the Phaeno Science Centre; interior works such as the Z.CAR, the three-wheeled car; and a new high fashion boot for the Lacoste brand. She was also the first woman to win the Pritzker Prize for Architecture.

The Palm Islands (Modern Architectural Wonders)

Man-made islands off the coast of Dubai, in the Persian Gulf (UAE): an artificial archipelago of three islands, Palm Jumeirah, Palm Jebel Ali and Palm Deira. They add 520 kilometres of beaches to the city. The purpose was to increase Dubai's tourism with a one-of-a-kind tourist destination: world-class hotels, upscale services and amenities.

10. Mini-test (35 questions)

Répondez d'abord sans regarder la colonne de droite, puis comparez.

#	Question	Réponse modèle
1	Which word means: providers of essential services such as gas, electricity, water or telecommunications?	Utilities.
2	What is the difference between renovation and restoration?	Restoration recovers the form and details of a building as it appeared at a particular period, by removing later work or replacing missing earlier work. Renovation modernizes an old or historic structure and may not be consistent with the original design.
3	What is backland?	Land which is behind existing development, with no or very limited road frontage.
4	What is contaminated land?	Land which has been polluted or harmed in some way, so it is unfit for safe development and most practical uses.
5	What does "scale" mean in architecture?	The sense of proportion or apparent size of a building or building element, created by its placement and size in its setting.
6	Define urban design.	The planning and design of cities, focusing on the three-dimensional form and function of public and publicly accessible space.
7	What is the difference between mortar and grout?	Mortar (sand, water, cement or lime) fixes bricks or stones together when building walls. Grout is a mortar or paste used to fill crevices, especially the gaps between wall or floor tiles.
8	What is rebar used for?	Rebar is steel in the form of bars or a mesh, put inside concrete to make it stronger.
9	What is concrete made of?	A mixture of broken stone or gravel, sand, cement and water. It can be poured into moulds and forms a mass resembling stone on hardening.
10	Where is Notre-Dame and what was it built on?	At the eastern end of the Île de la Cité in Paris. It was built on the ruins of two earlier churches, themselves built after a Gallo-Roman temple dedicated to Jupiter.
11	When were the choir, the western facade and the nave completed?	By 1250. Porches, chapels and other embellishments were added over the next 100 years.
12	How high are the towers of Notre-Dame? And the spires?	The towers are 68 metres high. The spires with which they were to be crowned were never added. (The central spire was added during the 19th-century restoration.)
13	What is special about the three great rose windows?	They alone retain their 13th-century glass.

#	Question	Réponse modèle
14	What are the features of the Burj Al Arab that make it so unusual?	Luxurious amenities, the world's tallest atrium, its own helicopter landing pad, and the tallest tennis court at the top. It is the most recognizable hotel in Dubai.
15	How did Tom Wright develop the idea of the Burj Al Arab?	The brief was to create an icon for Dubai, as Sydney has its opera house. His first drawing (a felt-pen sketch on a paper serviette) and a simple card model, shown to the client in October 1993, convinced the client that the tower should be built. It was completed in 1999.
16	How can you characterize Zaha Hadid's projects?	Dynamic formal qualities, sinuously curving shapes or crystallized strata: a kind of new Baroque, sensuous, vibrant and engaging. Never bland or mundane, but assertive statements that the world may look different.
17	What are the examples of Hadid's versatility in architecture?	The Contemporary Art Centre in Cincinnati, a car factory for BMW, the Phaeno Science Centre; interior works such as the Z.CAR (a three-wheeled car); and a new high fashion boot for the Lacoste brand.
18	What are the Palm Islands and why were they built?	Man-made islands off the coast of Dubai (UAE) in the Persian Gulf: Palm Jumeirah, Palm Jebel Ali and Palm Deira. They add 520 km of beaches and were built to increase Dubai's tourism with a one-of-a-kind destination (world-class hotels, upscale services and amenities).
19	What differentiates a building material from another?	Its properties: strength, weight, durability and cost. Each material has its own properties (for example steel: high strength-to-weight ratio; wood: lightweight and a good insulation; masonry: durable and fire-resistant).
20	On what basis is the choice of construction materials made?	On the properties of the material, its cost and effectiveness, and the application: the loads on the building and the type of structure.
21	Is there a difference between concrete and mortar?	Yes. Mortar is a mixture of sand, water and cement or lime, used to fix bricks or stones together when building walls. Concrete is a mixture of broken stone or gravel, sand, cement and water; poured into moulds, it hardens into a mass like stone and is a structural material.
22	Concrete is a good choice as a material. How is that?	It is very versatile and strong (very strong in compression). Combined with steel rebar, reinforced concrete is stronger and suitable for a wide range of structures: tall multi-story buildings, bridges, roads and tunnels.
23	State the negative aspect of steel.	Steel is a relatively expensive building material, so the structural engineer must choose economic sizes and shapes according to the actual loads, to avoid overdesign.

#	Question	Réponse modèle
24	What is the most striking feature of wood?	It provides good insulation from the cold, which makes it an excellent building material for homes and residential buildings. (It is also lightweight, readily available, economically feasible and highly machinable.)
25	What is the best choice of material for load-bearing walls?	Masonry (for example concrete block with vertical steel reinforcing), because it is strong in resisting compression loads and is durable and fire-resistant.
26	Why is wood rarely used for foundations and basement walls?	Because it must be pressure treated because of its contact with soil and moisture, which can be fairly expensive. In a wood framed house, the foundations and basement walls are usually reinforced concrete.
27	Why must the bottom masonry wall be stronger than the upper ones?	Because the load on the first-floor wall is the accumulation of the weight of all the floors above it. It is reinforced with steel bars and concrete grout in the voids.
28	What characterizes ancient Egyptian architecture?	The tension between the divine and the mortal world. People believed in the omnipotence of gods; the temple or palace acted as a house for the gods, and the construction was accompanied by rituals. The architect was merely part of a continuing tradition.
29	Why did the Byzantine Empire emerge, and for how long did it last?	It emerged as a distinct entity after AD 330, when the Emperor Constantine moved the capital of the Roman Empire east from Rome to Byzantium (later Constantinople, now Istanbul). It endured for more than a millennium, until the capture of Constantinople by the Ottoman Turks in 1453.
30	How did early Byzantine architecture develop?	As a continuation of Roman architecture. Stylistic drift, technological advancement and political and territorial changes meant that a distinct style emerged, with influences from the Near East. It used the Greek cross plan, and brick and plaster as well as stone.
31	What are the principal types of Islamic architecture?	The Mosque, the Tomb, the Palace, the Fort, the School and urban buildings, plus a rich vocabulary for buildings of lesser importance such as public baths, fountains and domestic architecture. It encompasses both secular and religious styles.
32	What sets Islamic architecture apart from other styles?	It discourages illustrations of anything living, such as animals and humans.
33	Why is Indian architecture very rich?	It encompasses a wide variety of geographically and historically spread structures: a blend of ancient and native traditions with forms and technologies from West and Central Asia and Europe. Styles range from Hindu temple architecture to Islamic, western classical, modern and post-modern architecture.

#	Question	Réponse modèle
34	What was Persian architecture designed for?	Solely to display the wealth of the state, and to impress guests. The Persians also contributed to urban design by building massive cities.
35	What should today's architects take into consideration?	Form, texture, structure, space, mass, materials and costs, and modern concerns such as the environment. They need a good grasp of mathematics, engineering and science.
